PHILIPS HUE BRIDGE *

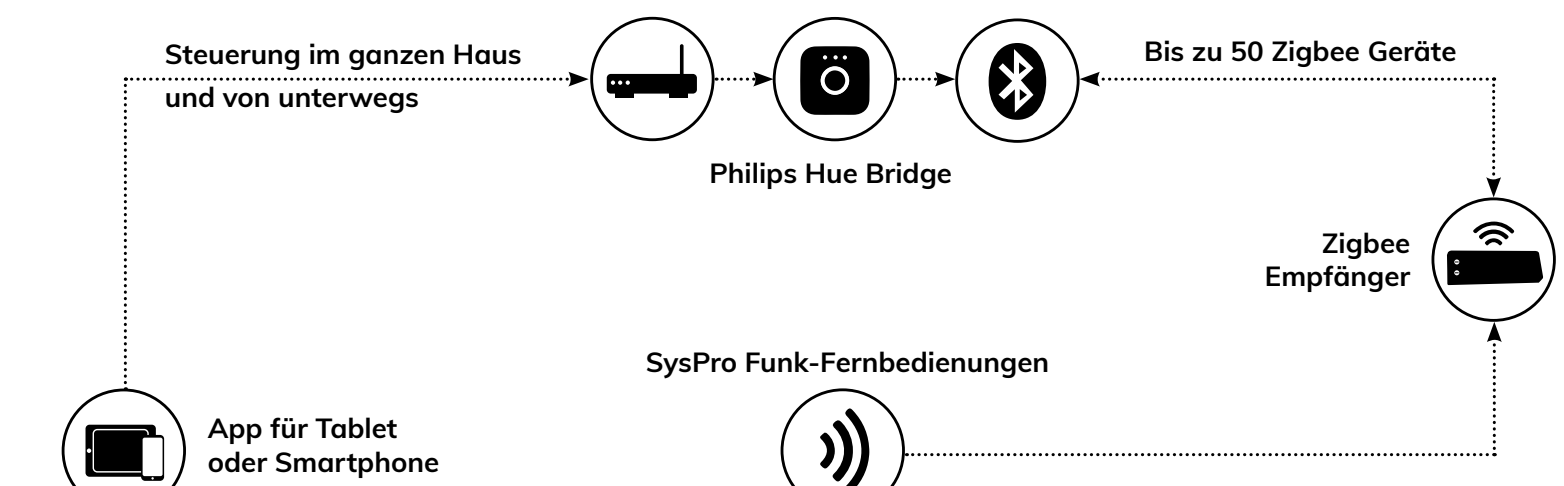

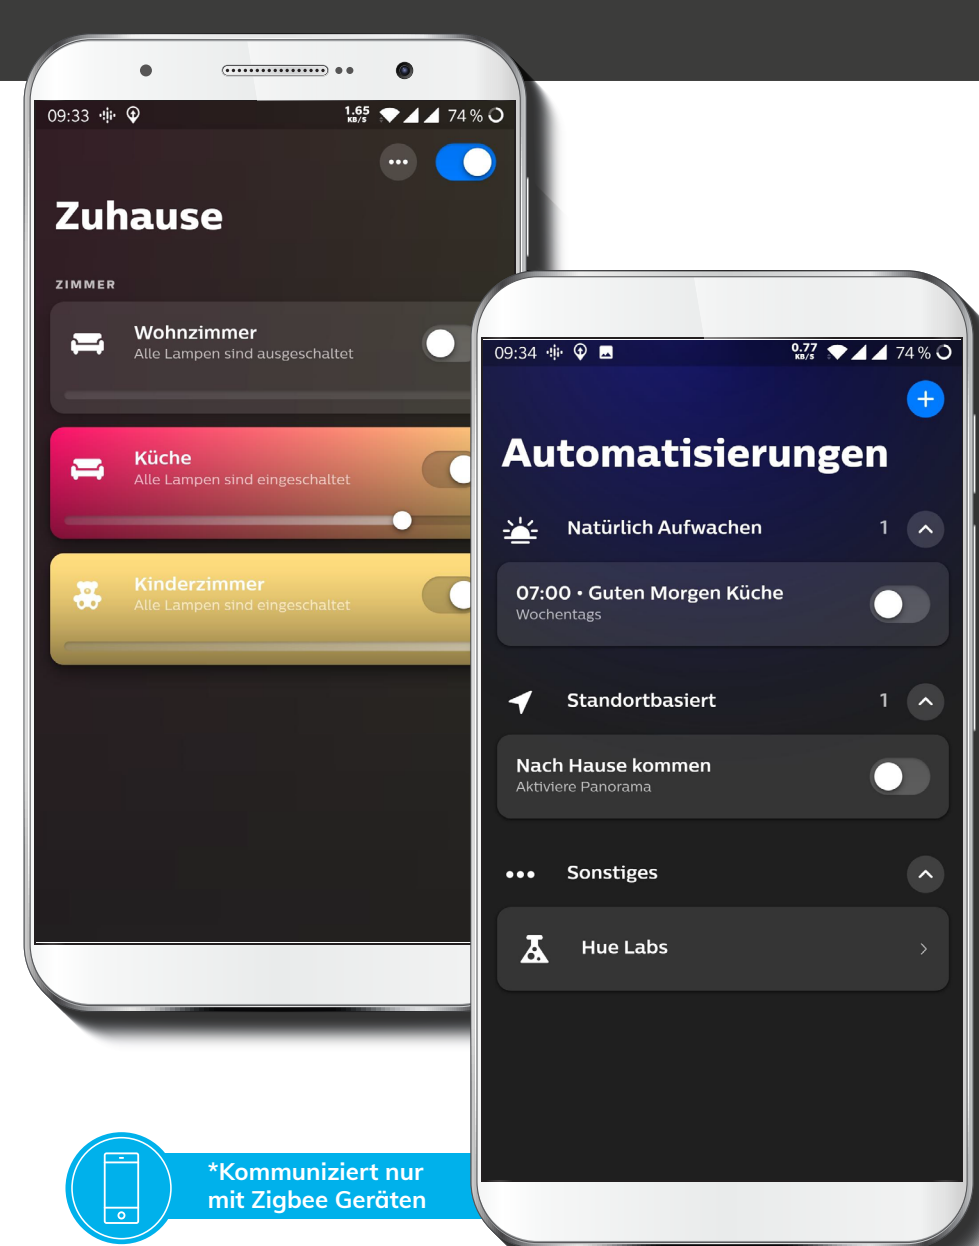

SYS-PRO GOES SMART HOME

Mit den intuitiven Apps für die Philips Hue Bridge und unseren vier neuen Sys-Pro + ZigBee Aktoren können Lichtquellen ganz einfach vom Smartphone, Tablet, Windows-PC oder MAC aus bedient und durch Einrichtung von Szenen und Routinen, sogar automatisiert und smart gesteuert werden. Mit einer optionalen Kopplung von Sprachassistenten (z.B. mit Amazon's Alexa, Apple's Siri oder Google's Assistant) mit der Philips HUE Bridge sind zudem Schaltvorgänge auch via Sprachbefehl möglich. Bei aufrechtem Mobilnetzempfang und eingestellter Freigabe wird eine Steuerung von unterwegs via Philips HUE Smartphone Apps und der Philips HUE Bridge unterstützt.

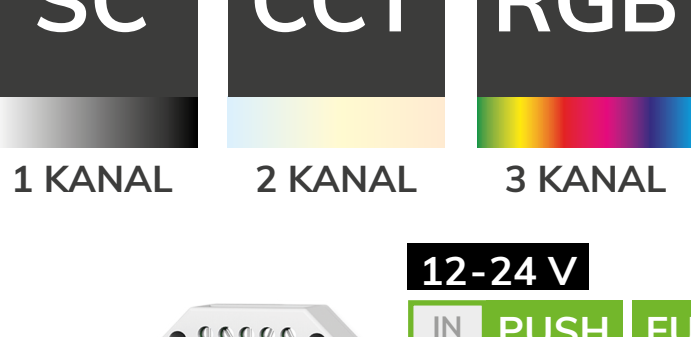

Unabhängig von einer aufrechten Netzwerkverbindung und einer aktivierten Philips HUE Bridge sind unsere vier Sys-Pro + ZigBee Funkempfänger weiterhin für die Schaltbefehle jeder gekoppelten Sys-Pro Funkfernbedienung empfangsbereit.

Dies gewährleistet eine zuverlässige Bedienung vor Ort, selbst bei Netzwerkproblemen!

Baugleiche Sys-Pro sowie Sys-Pro + ZigBee Funkempfänger errichten innerhalb einer Zone ein Mesh-Netzwerk. Das heißt, jeder Empfänger sendet das erhaltene Signal nochmal an andere Empfänger derselben Zone weiter.

PHILIPS HUE BRIDGE *

Sys-Pro GOES SMART HOME

With the intuitive apps for the Philips Hue Bridge and our four new Sys-Pro + ZigBee actuators, light sources can be easily controlled from a smartphone, tablet, Windows PC, or MAC, and can even be automated and smart-controlled by setting up scenes and routines. With an optional coupling of voice assistants (e.g. with Amazon's Alexa, Apple's Siri or Google's Assistant) with the Philips Hue Bridge, switching operations are also possible via voice command. If there is good mobile network reception and the permissions are set, control on the go is supported via the Philips Hue smartphone apps and the Philips Hue Bridge.

Regardless of an active network connection and an activated Philips Hue Bridge, our four Sys-Pro + ZigBee radio receivers are still ready to receive the switching commands of any paired Sys-Pro radio remote control.

This ensures reliable operation on site, even in the event of network problems.

Structurally identical Sys-Pro and Sys-Pro + ZigBee wireless receivers establish a mesh network within a zone. This means that each receiver forwards the received signal to other additional receivers in the same zone.
