**18** Led sports facility lighting

# Industrial lighting

## AN OPTIMAL LED INDUSTRIAL LIGHTING CONCEPT

- minimizes the risk of occupational accidents,
- promotes motivation and of course the efficiency of employees and
- increases productivity in the company.

### Operational safety and productivity

The requirements for LED lighting solutions in the LED industrial lighting sector are very high. On the one hand, numerous standards and regulations must be complied with in order to ensure safety in operation. On the other hand, it is important to provide employees with an optimally illuminated workplace where they can perform their tasks productively and motivated by the appropriate light.

### Profitability and increased competitiveness

Rising energy prices, increasingly scarce resources and increasingly stringent environmental laws require, apart from the ecological aspect, massive measures to save energy and thus reduce ongoing operating costs. The decision to switch to intelligent LED industrial lighting concepts is a big step towards sustainable cost-effectiveness and increased competitiveness.

### Economic efficiency

It goes without saying that specific advice, lighting planning and calculation by professional lighting planners and an amortization calculation are essential. Our sales staff are happy to calculate the ecological and economic efficiency for every project offer with the help of all measurement data, technical parameters and commercial factors. With the help of an amortization calculation, the investment costs can be shown transparently and thus facilitate the business decision-making process.

# YOUR ADDED VALUE WITH ISOLED®!

## Standardised Product range

More than 3.450 product  
High-end LED components  
High product availability

## Intelligent project lighting solutions

Scalable LED control technology  
Holistic LED lighting systems  
Personal project support

## Customer-specific Manufacture

Manufactured light elements  
Precise custom production  
Delivery ready for installation

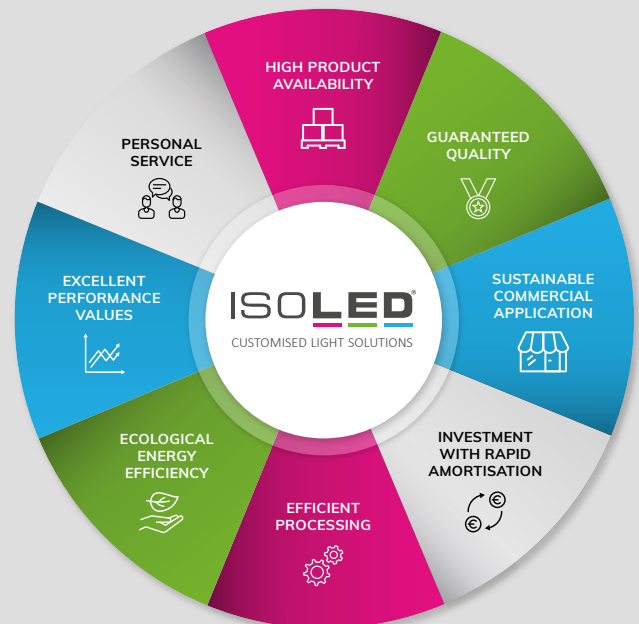

## CUSTOMISED LIGHT SOLUTIONS

SUSTAINABLE EFFICIENCY IMPROVEMENT  
WITH SMART LED LIGHTING CONCEPTS

We are a full-range LED supplier for individual lighting concepts and orient ourselves in the design of our wide product range to both the

- Requirements of our customers as well as on the
- technical progress of LED technology.

Excellent quality, high consulting competence of our employees as well as sustainable growth of our company ensure a reliable and long-term demand coverage with innovative LED lighting solutions for our partners.

## THE NEW PRODUCT CATALOG ISOLED® 2025 COLLECTION

For a targeted customer approach, we have divided our catalog into six subject areas so that you always have the suitable catalog with the desired product groups at hand. Of course, you can also browse through all ISOLED® catalogs 2025 online and thus actively contribute to sustainability.

### Six themed catalogs

- » 1.280 pages full of highlights
- » Available in the languages: DE, EN, FR, IT & HU
- » Online flip catalog and high-quality print version
- » Manufactured light elements
- » Individual lighting concepts
- » Sustainable, intelligent system solutions
- » Special designs and OEM production
- » Unique, one-of-a-kind reclaimed wood luminaires
- » Efficient, adaptable LED acoustic luminaires

# LED EMERGENCY / ESCAPE LIGHTS

LED emergency light/escape route luminaires

**EMERGENCY LIGHT  
OPERATION 3 HOURS**

## Safety in case of emergency

In the event of a power outage or failure of the general power supply or lighting system, enough lighting (emergency lighting) must be ensured to safely exit the building or to avoid panic.

## European standard for labelling

The legal requirements regarding lighting requirements and marking of escape and rescue routes are regulated in the European standards EN 50172:2005 and EN 1838:2019.

## Recommendation for planning

To plan an emergency lighting system in your building, we recommend that you consult an expert in the field. We would be happy to put you in touch with a partner in your area.

### LED panels and Linear-Diffuser luminaires with Battery Pack

ISOLED® Luminaires with integrated rechargeable battery pack (see page 85 Battery module for LED panels and page 109 Pro-fessional Linear-Diffuser luminaire) ensure basic lighting in offices, workshops, basements and underground car parks in the event of a power failure, even without an emergency power supply unit or central battery system.

### New in the range UNI4 and UNI7 emergency light/escape route luminaires conforming to standards

With our two emergency light/escape route luminaires UNI4 and UNI7, which have a recognition range of 20 and 18 meters respectively and four adhesive escape signs (up/down/left/right arrows), you can implement the marking and signage of escape and rescue routes safely and in accordance to standards.

### Integrated battery for 3 hours emergency operation

The UNI4 LED light is equipped with a 1.500 mAh Ni-cd battery and the UNI7 with a 1.900 mAh battery, which allows a battery operation for more than 3 hours in case of power failure (charging time approx. 24h).

If the power supply is maintained, a switched continuous operation is optionally possible.

### Automated self-tests replace manual function checks

After the initial installation, the luminaires carry out a self-test, a function test once a week and a long-term test 36 hours after the initial installation and once a year. The periodically prescribed and time-consuming manual function checks are therefore no longer necessary.

### Note on the operation display

Manual tests can be initialized at any time by pressing the integrated test button. Correct operation is indicated by a green signal LED, errors by a red signal LED.

## Guidelines for emergency light/escape route luminaires

Basically, the following applies to emergency lights and escape route luminaires etc:

-  **Placement at least 2m above the ground** (visible from both sides)
-  **Distance <2m for each exit door to be used in an emergency**
-  **Distance <2m for every stair, height or direction change**
-  **Escape signs must be illuminated in the event of a power failure**
-  **Distance <2m at any first aid kit or fire alarm point**
-  **The minimum lighting intensity on escape and rescue routes is 1 lux on the ground,**
-  **where the ratio of maximum to minimum lighting intensity must be <40:1.**
-  **(At machines or places with special hazards 15lx at light median <10:1**

### Note on planning emergency lighting systems

When planning an emergency lighting system, we recommend consulting an expert in this field who can guarantee compliance with all European standards.

**Strong cost reduction and quick amortization with demand-oriented light quality**

# **LED STREET / CAR PARK LIGHTING**

**Top LED lighting quality for sport and leisure | Project Support from planning to commissioning**

# **LED SPORTS FACILITY LIGHTING**

# Construction industry and trade

LED floodlighting systems also provide perfect illumination on construction sites, logistical handling areas such as ports and train stations, and many other industrial areas.

## SAFETY

Good lighting is an important prerequisite for safety in the workplace. Especially when working at night and in bad weather, it reduces accidents and elevates productivity.

## ENERGY EFFICIENCY

In contrast to conventional lighting, LED floodlighting has the advantage of being very energy-efficient and long-lasting.

## QUALITY

The floodlights have a high protection class and are therefore perfect for construction sites and various other industrial applications with their low dust and water sensitivity.

**Power plants**

**Construction crane**

**Building yard/ recycling center**

**Car parks**

**Train stations**

**Port/Wharf**

# ISOLED® TECHNOLOGY

## On the pulse of progress

Driven forward by the innovative power of our specialist team as well as the increasing demands for our customers and the market, taking into account the latest technologies, we develop and design much improved and completely new LED components, products and lighting systems.

## Unique through customised

In close cooperation and intensive exchange of our product management team with the production side research & development team, trendsetting, solution oriented and custom lighting concepts with the highest economic and environmental energy efficiency arise.

**QUALITY IS NO  
COINCIDENCE**

**Our customers and partners benefit consistently from quality, functionality and efficiency.**

Sustainable Performance Values and Stable Light Quality

# PRODUCT QUALITY AND DESIGN

## SUSTAINABLE QUALITY

### Your quality requirements are our touchstone

For our customers and partners, we undertake to sustainably supply lights, lighting construction elements and systems, control equipment based on the latest LED technology, as well as all services in

- best and guaranteed quality,
- with the greatest possible ecological efficiency as well as
- economic stability of value

sustainably.

#### ISOLED® Data sheets

Real performance data measured under real conditions are published in a data sheet for each item. Every customer has direct online download access.

### Sustainable quality and operational safety

The complete LED ISOLED® product range is CE-marked and therefore complies with the requirements for product conformity according to the latest EU guidelines.

A tested and certified CE product coordinator from ISOLED® takes on the implementation of all ongoing internal standards and cross-checks of the EU regulations. Supplier audits ensure compliance with the CE requirements by the manufacturer.

The heart of our light laboratory are the two ulbricht spheres (diameter 0.5 m and 1.7 m), which are used to measure photometric data.

### Trust through data transparency

#### REAL PERFORMANCE DATA

The satisfaction of our customers and partners is achieved through data transparency. As part of a regimented multi-stage quality control programme, we test and measure all photometric parameters and in addition to numerous additional details, include these within our product datasheets.

Our specified performance data are NOT the result of physical or theoretical calculations, but they correspond to the photometric values of the final overall product actually measured in our in-house light laboratory. (I.e. including reflectors, optics, housing - measured under real ambient conditions, etc.)

On request, we can of course also provide specific reports from our photometric test laboratory.

Whether it is a new acquisition or a conversion to LEDs, both cases are long-term investments. Against this background, it is of particular importance to consider the following quality features in the decision-making process:

- Materials of the individual components (e.g. aluminium housing)
- Glasses and covers
- High-quality workmanship (pay attention to seams and connecting pieces - small proportion of load-bearing plastic elements)
- High quality lacquers
- TÜV certification
- Protection class IP (dust and water protection)
- D-marking acc. EN 60598-24 (LED lights suitable for use in fire-endangered locations)
- Glare factor (UGR acc. EN 12464)
- Timeless and architecturally integrating aesthetics

#### **Your quality standard is our touchstone!**

The matching LED illuminants are of tested quality and designed for commercial use. LED branded products from ISOLED® consist exclusively of high-quality components, which are manufactured in selected materials in modern and innovative production processes. Only tested LED chips and standardised components (excellent quality classes) are used.

They convince with their performance values:

- service life
- Light quality
- Luminous flux
- Light intensity
- Color rendering
- Color temperature
- Connected load
- Heat generation (cooling) etc.

### **LED chips and components of the highest quality classes**

LED branded products from ISOLED® consist exclusively of high-quality components, which are manufactured in selected materials in modern and innovative production processes.

Only tested LED chips and standardised components (excellent quality) are used. Our LED products must meet the prescribed performance values in accordance with the strictest quality and test criteria without any complaints in order to be finally released for sale.

# ADVANTAGE THROUGH KNOW-HOW

## Improving consultancy skills

We combine many years of experience in technical application areas with LED know-how and pass both on to our employees.

With a deep understanding of the economic and environmental efficiency of LED light solutions, as well as enthusiasm for this sustainable and environmentally friendly type of lighting, they support our customers and partners through each LED project.

## Specific customer training

We have a major interest, in training you and your employees in the topics of

- ISOLED® Product knowledge,
- ISOLED® application technology,
- LED basic knowledge and
- LED sales

for basic training and further development.

„Confidence comes with knowledge, this is why we share our expertise!“

ISOLED® Team

## ISOLED® ACADEMY

### TAKE ADVANTAGE OF OUR OFFER

We offer **onsite and offsite training**. Whether in-house, by phone or webinar - you and your employees will receive all information and documents from us.

- » LED know-how
  - LED technology basics
  - ISOLED® product training
  - ISOLED® workshops for LED application technology
  - ISOLED® Workshop “Lighting design with DIALux”
  - Customer-specific LED workshops

- » ISOLED® sales support for customers, partners and their staff
  - LED starter support for trade and crafts
  - Target group definition/market approach - How to reach your target customers (ISOLED® industry focus)!
  - 100% LED - targeted argumentation with facts. With knowledge you score points with customers!
  - 100 % ISOLED® - this is how you and your customers benefit from the ISOLED® range of services!
  - Customer-specific ISOLED® workshops

We would be happy to create your personal training program tailored to your team!

Please contact us and book your individual workshop!
