Carpenter, furniture manufacturer and kitchen planner

Ecologically sensible, economically valuable!

If you once considered light bulbs like the light bulb as a consumable item, the more expensive LED light source is considered a long-term and quickly amortized investment with a focus on energy and cost efficiency.

YOUR ADDED VALUE WITH ISOLED®!

Standardised Product range

- More than 3.450 product
- High-end LED components
- High product availability

Intelligent project lighting solutions

- Scalable LED control technology
- Holistic LED lighting systems
- Personal project support

Customer-specific Manufacture

- Manufactured light elements
- Precise custom production
- Delivery ready for installation

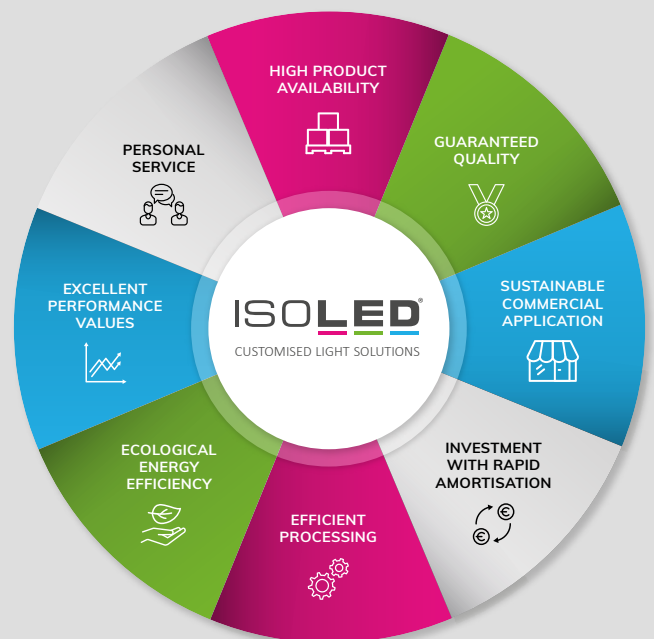

CUSTOMISED LIGHT SOLUTIONS

SUSTAINABLE EFFICIENCY IMPROVEMENT
WITH SMART LED LIGHTING CONCEPTS

We are a full-range LED supplier for individual lighting concepts and orient ourselves in the design of our wide product range to both the

- Requirements of our customers as well as on the
- technical progress of LED technology.

Excellent quality, high consulting competence of our employees as well as sustainable growth of our company ensure a reliable and long-term demand coverage with innovative LED lighting solutions for our partners.

THE NEW PRODUCT CATALOG ISOLED® 2025 COLLECTION

For a targeted customer approach, we have divided our catalog into six subject areas so that you always have the suitable catalog with the desired product groups at hand. Of course, you can also browse through all ISOLED® catalogs 2025 online and thus actively contribute to sustainability.

Six themed catalogs

- » 1.280 pages full of highlights
- » Available in the languages: DE, EN, FR, IT & HU
- » Online flip catalog and high-quality print version
- » Manufactured light elements
- » Individual lighting concepts
- » Sustainable, intelligent system solutions
- » Special designs and OEM production
- » Unique, one-of-a-kind reclaimed wood luminaires
- » Efficient, adaptable LED acoustic luminaires

CUSTOMISED ASSEMBLY

Focus your efforts on your core competences.

WE TAKE OVER THE PROFESSIONAL MANUFACTURING!

We are a customer-oriented company and, in addition to our extensive product range, offer services with sustainable added value. This includes, among other things, the professional assembly of light building elements with LED flex stripes, LED aluminum profiles and their additional components, which we are happy to take over for you.

Competent and reliable according to custom requirements!

You save valuable working time!

You can immediately start with the installation!

You have the certainty that your LED lighting will work reliably!

LED FLEX STRIPES

ISOLED® Flex tapes are particularly characterized by their strong conductor tracks (reduction of the voltage drop) and high-quality components. The power consumption drops, the heat development on the circuit boards is reduced. We offer a wide range of LED flex strips with a length of up to 15 meters per roll.

LED PROFILES

They are made of high quality anodized aluminum and can be used anywhere. We offer numerous designs for both installation and assembly. In combination with a cable channel, stand-alone LED pendant lights with / without wire suspension can be put together and installed. The desired lighting results can be achieved with transparent or satined covers. End caps and a wide range of accessories complete our easy-to-install LED profile systems.

APPLICATIONS

Light is the fourth dimension of a room and an essential factor in holistic architectural spatial planning.

Light makes visible!

Light works!

Light staged!

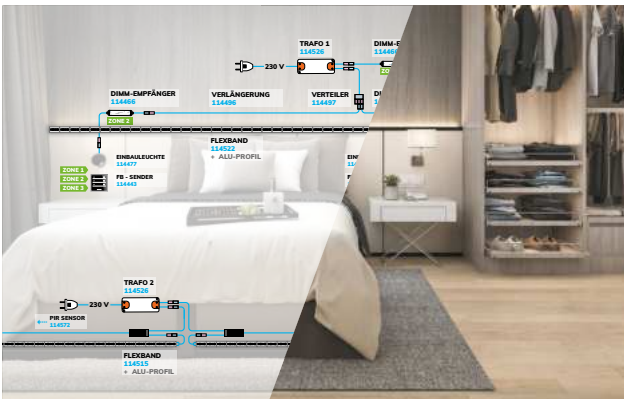

Examples of use

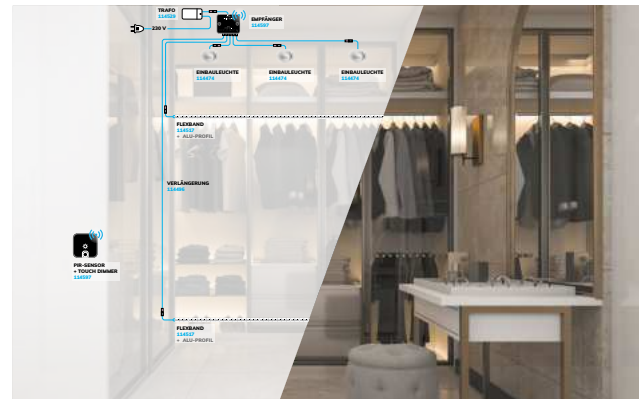

Living room

Kitchen

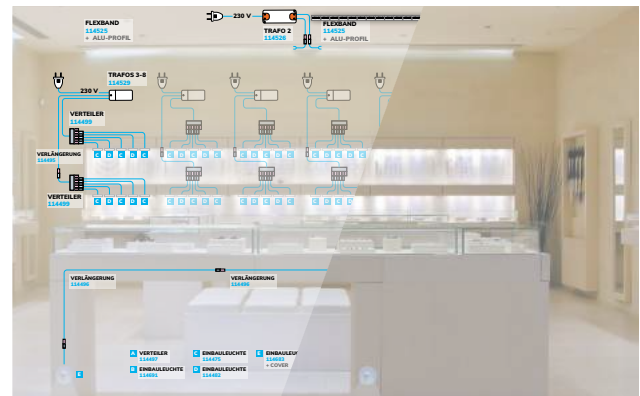

Bedroom

Wardrobe

Bathroom

Showroom Jeweller

EASY AND FAST TO YOUR LED LIGHTING SOLUTION

In every planned room there are lighting requirements.

Once the product type and number of each luminaire has been determined, details can be designed for your lighting solution. The following points offer guidelines for successful lighting planning:

Light color

Luminous efficacy

describes the efficiency of a light source

$$\text{Luminous efficiency} = \frac{\text{Luminous flux (lm)}}{\text{Power (W)}}$$

light source

The shape of the light can influence furniture and lighting effect. Already in the planning stage, it should be noted that dot light primarily emphasizes individual areas, while linear light can illuminate larger areas.

Light quality

The color rendering index CRI is given in Ra and thus evaluates the quality of the color rendering of light sources. The higher the color rendering index, the better the colors of an illuminated object are perceived. The higher the color rendering index, the better the colors of an illuminated object are perceived.

Alignment

direct

indirect

upward

downward

Forward

aside

While direct lighting is mainly used to set accents, indirect lighting creates mood and is particularly suitable for illuminating rooms. Structures are often illuminated from below, while individual objects are usually illuminated from above.

Light intensity

Work lighting
(>500 lx)

Ambient lighting
($150-500$ lx)

Accent / orientation lighting
(<150 lx)

Beam angle

between 8° and 360°

Compatibility of ballasts with products

Even before buying a luminaire, make sure that it has any necessary compatibility with a dimmer or motion sensor to install the lighting without worry.

recessed (installation)

mounted
(surface-mounting)

Mounting type

The mounting method of the light source should be well thought out. A surface-mounted light requires more space, but is more flexible and easier to remove. Recessed light sources, on the other hand, are often more discreet, but offer little room for change.

IP

Ingress Protection

Protection class

The IP code number indicates the protection of a housing against contact or ingress of foreign bodies (1st digit) and against ingress of moisture or water (2nd digit). The larger the code numbers, the better the protection of an enclosure.

Control

In addition, LED luminaires can be controlled with various controllers. You can choose between wall, hand and table remote controls. A Smart Home System integration with Zigbee is also possible.

Major cost reduction and rapid amortisation with appropriate light quality

ISOLED® TECHNOLOGY

On the pulse of progress

Driven forward by the innovative power of our specialist team as well as the increasing demands for our customers and the market, taking into account the latest technologies, we develop and design much improved and completely new LED components, products and lighting systems.

Unique through customised

In close cooperation and intensive exchange of our product management team with the production side research & development team, trendsetting, solution oriented and custom lighting concepts with the highest economic and environmental energy efficiency arise.

QUALITY IS NO
COINCIDENCE

Our customers and partners benefit consistently from quality, functionality and efficiency.

Sustainable Performance Values and Stable Light Quality

- High energy-efficient light output
- Exact binning
- High-end LED chips, PCBs & Components
- Standardised electronics Excellent product grades
- Reliable thermal management
- Tested materials

Modern ISOLED[®] lighting laboratory

- Multistagequality control
- Batch-managed material flow
- Quality management & warranty services
- Internal & external Quality audits
- Customer-oriented return management
- CE certification

- Product Development
- Intelligent Product Design
- Compact Construction
- Precision Manufacturing Processes
- Latest LED Technology
- Strict Quality Criteria

YOUR PARTNER

ISOLED[®] SINCE 2008

Licensed partnerships

SIGNIFY = PHILIPS

PRODUCT QUALITY AND DESIGN

SUSTAINABLE QUALITY

Your quality requirements are our touchstone

For our customers and partners, we undertake to sustainably supply lights, lighting construction elements and systems, control equipment based on the latest LED technology, as well as all services in

- best and guaranteed quality,
- with the greatest possible ecological efficiency as well as
- economic stability of value sustainably.

ISOLED® Data sheets

Real performance data measured under real conditions are published in a data sheet for each item. Every customer has direct online download access.

Sustainable quality and operational safety

The complete LED ISOLED® product range is CE-marked and therefore complies with the requirements for product conformity according to the latest EU guidelines.

A tested and certified CE product coordinator from ISOLED® takes on the implementation of all ongoing internal standards and cross-checks of the EU regulations. Supplier audits ensure compliance with the CE requirements by the manufacturer.

The heart of our light laboratory are the two ulbricht spheres (diameter 0.5 m and 1.7 m), which are used to measure photometric data.

Trust through data transparency

REAL PERFORMANCE DATA

The satisfaction of our customers and partners is achieved through data transparency. As part of a regimented multi-stage quality control programme, we test and measure all photometric parameters and in addition to numerous additional details, include these within our product datasheets.

Our specified performance data are NOT the result of physical or theoretical calculations, but they correspond to the photometric values of the final overall product actually measured in our in-house light laboratory. (I.e. including reflectors, optics, housing - measured under real ambient conditions, etc.)

On request, we can of course also provide specific reports from our photometric test laboratory.

Whether it is a new acquisition or a conversion to LEDs, both cases are long-term investments. Against this background, it is of particular importance to consider the following quality features in the decision-making process:

- Materials of the individual components (e.g. aluminium housing)
- Glasses and covers
- High-quality workmanship (pay attention to seams and connecting pieces - small proportion of load-bearing plastic elements)
- High quality lacquers
- TÜV certification
- Protection class IP (dust and water protection)
- D-marking acc. EN 60598-24 (LED lights suitable for use in fire-endangered locations)
- Glare factor (UGR acc. EN 12464)
- Timeless and architecturally integrating aesthetics

Your quality standard is our touchstone!

The matching LED illuminants are of tested quality and designed for commercial use. LED branded products from ISOLED® consist exclusively of high-quality components, which are manufactured in selected materials in modern and innovative production processes. Only tested LED chips and standardised components (excellent quality classes) are used.

They convince with their performance values:

- service life
- Light quality
- Luminous flux
- Light intensity
- Color rendering
- Color temperature
- Connected load
- Heat generation (cooling) etc.

LED chips and components of the highest quality classes

LED branded products from ISOLED® consist exclusively of high-quality components, which are manufactured in selected materials in modern and innovative production processes.

Only tested LED chips and standardised components (excellent quality) are used. Our LED products must meet the prescribed performance values in accordance with the strictest quality and test criteria without any complaints in order to be finally released for sale.

ADVANTAGE THROUGH KNOW-HOW

Improving consultancy skills

We combine many years of experience in technical application areas with LED know-how and pass both on to our employees.

With a deep understanding of the economic and environmental efficiency of LED light solutions, as well as enthusiasm for this sustainable and environmentally friendly type of lighting, they support our customers and partners through each LED project.

Specific customer training

We have a major interest, in training you and your employees in the topics of

- ISOLED® Product knowledge,
- ISOLED® application technology,
- LED basic knowledge and
- LED sales

for basic training and further development.

„Confidence comes with knowledge, this is why we share our expertise!“
