Lines of light across the room

From A to B without a profile - our Skyflex profiles make this possible. These can be easily mounted on the wall and stretched across the room as required. This flexible lighting solution not only offers exciting installations, but is also easy to install.

Skyflex profiles are ideal for rooms with curved ceilings or for implementing creative lighting installations. Whether in the office, at home or in a museum, the Skyflex creates a unique interplay of light and shadow and offers an intelligent and flexible lighting solution.

When installing, make sure that the screws are sufficiently tight, as high forces act on the mounting when the Skyflex is fully tensioned. The mounting material should be matched to the surface.

SKYFLEX LED TENSIONING SYSTEM

116833 10 m | white

116834 10 m | black

116835 20 m | white

116836 20 m | black

The Skyflex must be sufficiently tensioned and should not sag. We recommend using a laser measuring device to measure the spacing between the two walls to which the Skyflex is to be attached.

One lighting solution, countless advantages

Suitable for flex stripes with a maximum width of 15 mm

Flexible installation allows creative freedom in positioning

Maximum installation length 20 meters

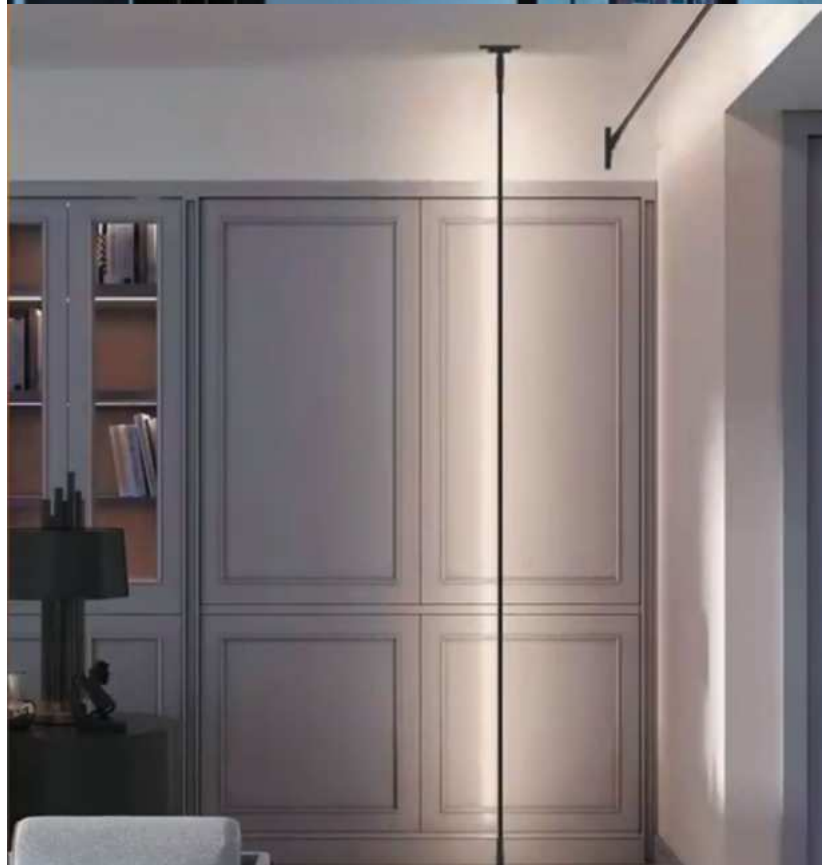

Single-sided feed

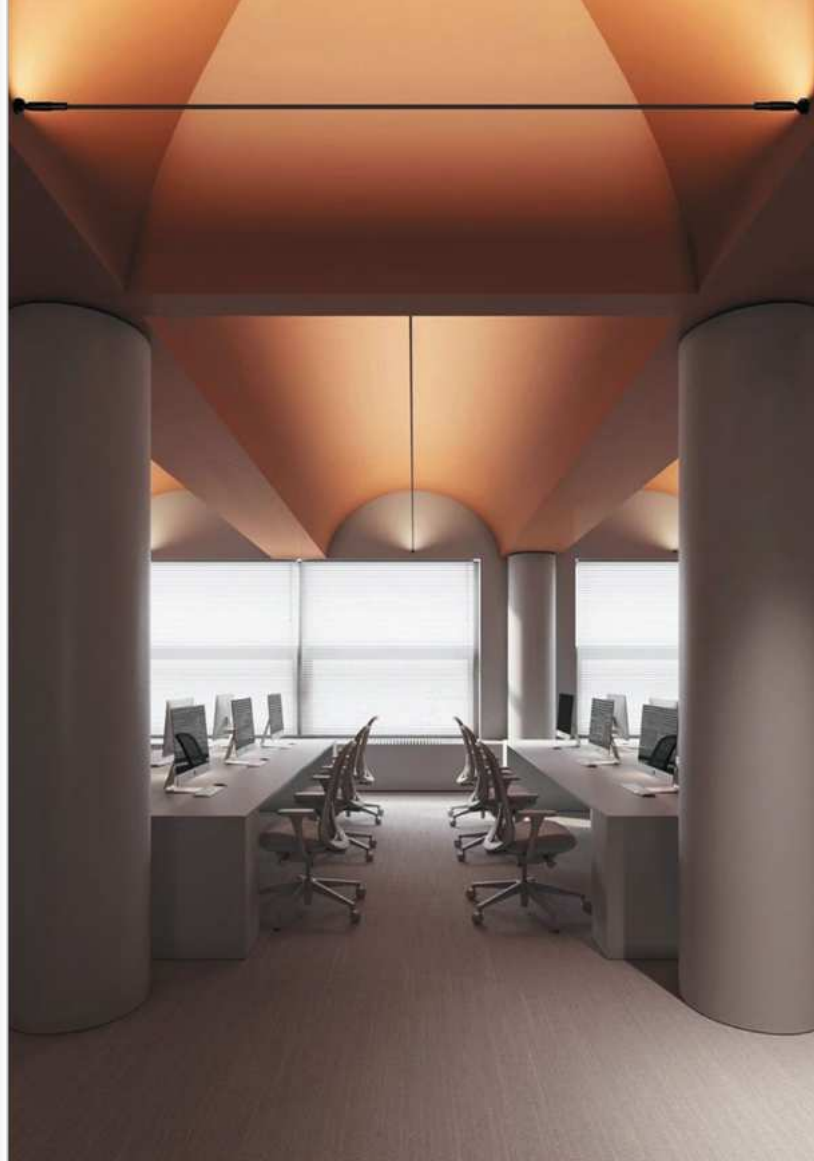

The length of the steel strip and flex stripe can be individually adjusted

Compatible with our Cover 26 [113652](#)
